Deep Dive into Frakers Lore

Origins of Frakers

Frakers first appeared on the Halo ring installation 04, where they were discovered by the UNSC as a minor threat. Their presence was initially dismissed as a mere nuisance, but subsequent encounters revealed that they possess a sophisticated social structure and a hive mind intelligence that can coordinate attacks on a massive scale. The species evolved in the harsh environments of the Halo rings, adapting to extreme temperatures and radiation, which explains their resilience.

Fraker Biology and Behavior

Frakers are characterized by:

- Exoskeletons: Provide natural armor against ballistic and energy weapons.
- Acidic Secretion: Allows them to dissolve metal and disrupt equipment.
- Rapid Reproduction: Their reproductive cycle can produce dozens of offspring in a single day.
- Hive Mind: Enables coordinated swarm tactics and adaptive strategies.

Fraker Tactics and Weaknesses

Frakers employ three primary tactics:

1. Swarm Assault: A large group overwhelms the enemy with sheer numbers.
2. Ambush: They use terrain to conceal themselves, striking unexpectedly.
3. Acidic Disruption: They secrete acid to corrode weapons and armor.

Despite their formidable abilities, Frakers have critical weaknesses:

- They are vulnerable to high velocity, rapid fire weapons.
- They have limited range; long range engagements are less effective.
- They are susceptible to environmental hazards such as fire and electricity.

Fraker Encounters in Halo Games

Frakers appear in multiple titles:
