1. Philips CL 035A remote
2. New or replacement batteries (usually 2 × AA)
3. List of device codes from the manual or online database
4. Device you want to control (TV, receiver, etc.)
5. Time and patience – the process takes about 5–10 minutes per device.

Ensure the device you're programming is powered on and in a visible location so the remote can send a clear signal.

Step by Step Programming

Follow these steps to program the CL 035A to your device. The procedure is identical for most devices, regardless of brand.

1. Turn on the Device

Make sure the TV, receiver, or other equipment is powered on and ready to receive commands.

2. Insert Batteries

Open the battery compartment on the back of the remote, insert two AA batteries, and close the cover. The LED indicator should light up.

3. Enter the Programming Mode

Press and hold the **SETUP** button until the LED blinks twice. This signals that the remote is in programming mode.

4. Enter the Device Code

Using the number pad on the remote, type the four digit code for your device. For example, if you're programming a Philips TV, the code might be **0011**.

5. Test the Remote

After entering the code, press the **POWER** button on the remote. If the device turns off (or on), the code is correct. If nothing happens, repeat steps 4 and 5 with a different code from the manual.

6. Save the Code

Once the device responds, press the **SETUP** button again to lock the code. The LED should stop blinking, indicating successful programming.

7. Repeat for Additional Devices

Follow the same process for any other devices you wish to control. The CL 035A can store up to 30 device codes.

- Update the Manual: If you find a new code online, add it to your notes for future reference.
